Reviews

This publication is really gripping and exciting. It really is basic but unexpected situations in the 50 % in the book. It is extremely difficult to leave it before concluding, once you begin to read the book.

Brand New Book ***** Print on Demand *****.In 2007 an underwater survey of the coral reef system off Bahia de la Ascension (Punta Allen, Mexico) discovered 26 anomalies among the reef, ranging from man-made geometric patterns to unusual shadows to unusual bottom disturbances to possible debris fields. It is the search for and the analysis of the impact of these 26 anomalies that is the subject of this report. A Maritime Education and Research Society (MERS) Diving Team, supported by the Mexican Instituto Nacional de Antropologia e Historia, Subdirección de Arqueología Subacuática (INAH) and the Sian Ka'an Biosphere Reserve re-visited the area nine years later to inspect these 26 sites to ensure that the reef system remained healthy despite the findings of such anomalies, many of which were clearly man-made and resting on the reef.
