Excerpt: . . . control of a skilled technical chemist. Not only must the incoming raw material be sampled and analyzed at regular intervals, but the finished by-products must be kept up to a certain definite standard in order that they may be of commercial value. The laws of some states prescribe the composition of various byproducts, and in such cases it is imperative to keep the quality up to the legal standard in order to secure a safe market. This can be done only by careful supervision. 3. In general, a cheaper grade of fuel may be used in the byproduct process than in the ordinary system. 4. In some cases, the cost of the chemicals required would be so high as to make the process unprofitable. 5. The successful selling of the by-products will be the most important factor. Since ammonia sulphate is at present about...
