Shaker Verlag Mai 2009, 2009. Taschenbuch. Book Condition: Neu. 208x148x10 mm. Neuware - It is hard to believe in security when it is so easy to access the communication media such as wireless radio media. However, the research community in industry and academia has for many years extended wired based security mechanisms or developed new security mechanisms and security protocols to sustain this marriage between wireless/mobile networks and security. Note that the mobile communication market is highly growing for different services and not only mobile phone service. That why securing wireless and mobile communications, is crucial for the perennial of the deployment of services over these networks. Wireless and mobile communication networks have gained a tremendous success in today's communication market both in general or professional usage. In fact, getting communication services anytime, anywhere and on the move has been an essential need expressed by connected people. This becomes true thanks to the evolution of communication technologies from wired to wireless and mobile technologies, but also the miniaturization of terminals. Offering services to users on the move has significantly improved productivity for professionals and flexibility for general users. However, we cannot ignore the existence of important inherent vulnerabilities of these unwired communication systems, which gives the network security discipline a key role in convincing users to trust the usage of these unwired communication systems supported by security mechanisms. Since the beginning of networking era, security was part of the network architectures and protocols design even if it is considered as slowing down the communication systems. Actually, network security is just a natural evolution of security of standalone or distributed operating systems dealing with machine/network's access control, authorization, and confidentiality and so on. Even though the context has changed from wired to wireless networks, we are facing the same issues and...
