Reviews

An exceptional ebook along with the typeface employed was intriguing to see. It really is simplistic but surprises within the fifty percent of the ebook. It is extremely difficult to leave it before concluding, once you begin to read the book.

Table XI contains geographical data for all stations reporting during 1888. An asterisk in the column of elevation indicates that the value there given is only approximate. The observers themselves are in most cases the authority for these data. The distribution of the stations is illustrated in plate IV, where the numbers correspond to those in the first column of this table. Table XII is the annual summary for 1889 for such stations as have reported continuously through the year. The daily means, from which the monthly and annual means are computed, are reduced from the arithmetical means of the actual observations by applying the corrections proper to the hours of observation according to the data of volume XXI of the Smithsonian Contributions. In determining the number of rainy days, those were counted in which 0.01 inch or more of precipitation was recorded. Table XIII, XIV, and XV contain barometric records reduced to sea-level, with the addition of the mean monthly relative humidity in table XIII. The values of the highest and lowest readings for Nashua, Blue Hill, Providence and New York (a) are taken from self-recording barographs (See p. 145). Table XVI and XVII exhibit the departures of the mean monthly temperatures and the total monthly precipitation of 1889, for those stations having a record of ten years or more. The general departure of temperature and precipitation from the normal in New England has been considered on page 112....
